

Ninja Coffee Bar® Single-Serve System Drip Stop Toggle and Brew Basket Replacement

This guide will teach you how to replace the...

Written By: Naser Aldousari

INTRODUCTION

This guide will teach you how to replace the drip stop toggle and/or the brew basket of your Ninja Coffee Bar® Single-Serve System. In a lot of coffee machines after heavy use the brew based can start to leak, and these fixes are very similar, so that is why we did both of these fixes together. Warning: be very careful when unscrewing the brew basket because there is a small spring that releases the drip stop toggle that needs to stay in place. Also you will need a longer skinnier Phillips head screwdriver than the one in the iFixit tool kit to complete this repair.

TOOLS:

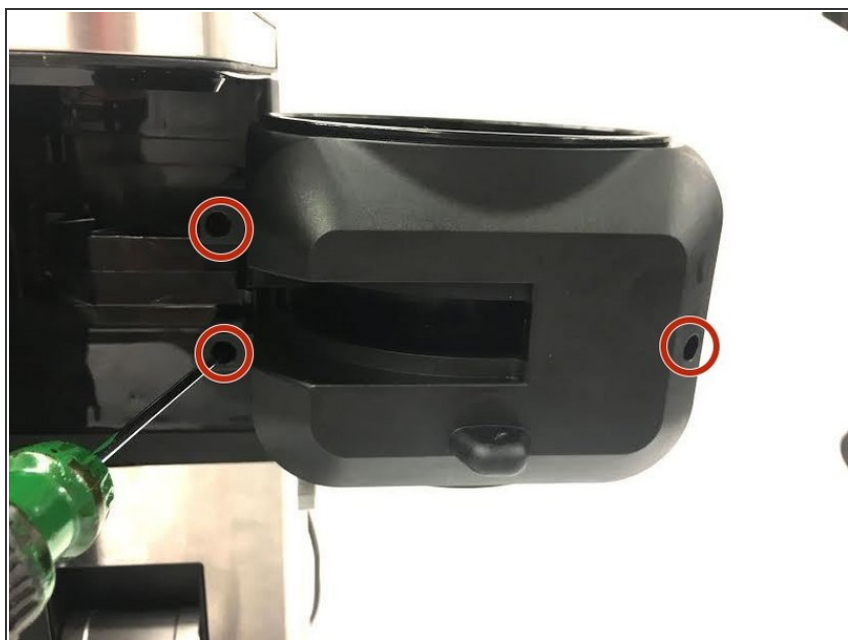

- [Tweezers](#) (1)
-

Step 1 — Drip Stop Toggle and Brew Basket

- Slide the brew baskets to the open position.

Step 2

- Remove three 6mm screws with Phillips head screw driver.

Step 3

- Using needle nose tweezers, push the bottom of the pin up from behind the brew basket
- Pull the pin out.

Step 4

- Remove brew basket from swinging basket holder

Step 5

- Use a Phillips screwdriver to remove one 6mm screw from the drip stop toggle.
- Remove the drip stop toggle.

To reassemble your device, follow these instructions in reverse order.
