INTRODUCTION

Here, using a Phillips screwdriver, and a plastic opening tool, you will learn how to clean the fan in your computer.

🔧 TOOLS:

- iFixit Opening Tools (1)
- Phillips #1 Screwdriver (1)

Step 1 — Battery

- Click button 1 to the unlocked position.

- ⓘ This button will have a 1 by it.

Step 2

- Push and hold button 2 to the left.

- As you push button 2 to the left position, simultaneously lift up the battery pack.

- ⓘ This button will have a 2 by it.

Step 3 — Lower Case

- Using the Phillips #1 screwdriver, remove the eleven 2.5mm screws.
Step 4

- Remove the one 2.5mm Phillips #1 middle plate screw.

Step 5

- Lift up the middle vent panel.

- Set the panel to the side.

Step 6

- Using the plastic opening tool, remove the outer panel and set to the side.

⚠ Be careful not to break the back of the computer.

Step 7 — Fan

- Using a Phillips #1 screwdriver, remove the one 1.5mm screw.

Step 8

- Lift the fan up and blow compressed air or replace with a new one.

- ⓘ Blow compressed air into the spirals in the middle of the fan.

To reassemble your device, follow these instructions in reverse order.
