Step 1 — Solid-State Drive

● Remove the thirteen 1.4mm screws using a Phillips #2 screwdriver.

Step 2

● Locate hidden screw found in the middle of back hardcover.

  ⓘ Found under rubber covering shown in picture.

● Remove the single Torx Security screw using a TR7 screwdriver.

Step 3

- Peel off hard cover to expose interior of device.

Step 4

- Find the solid-state drive located below the battery, and next to the RAM.

- Unscrew the two 1mm screws located at the top of the solid-state drive with a Phillips #1 screwdriver.

Step 5

- Pull the solid-state drive from its socket
  - (i) The solid-state drive should automatically pop-up from its housing once the screws are removed.

To reassemble your device, follow these instructions in reverse order.
