

HP Elitebook 820 G1 Monitor Display Replacement

This guide instructs on how to replace a monitor display.

Written By: Alberto Carlos Perez

INTRODUCTION

Displays can get easily damaged either with time, or with any liquids or impacts.

TOOLS:

- iFixit Opening Tools (1)
- Phillips #00 Screwdriver (1)
- T7 Torx Screwdriver (1)
- Phillips #0 Screwdriver (1)

Step 1 — Battery

- Ensure the laptop is completely powered off and power adapter is unplugged before removing the battery.
- Turn over laptop so that the bottom is showing.
- Unlock the latch.

Step 2

 Remove the back cover and you will then be able to see the battery.

 Unlatch the two latches securing the battery in the case.

Step 4

 Use a plastic opening tool to lift and remove the battery.

Step 5 — Fan

 Remove the hard drive by unscrewing the four 8mm screws with the T7 philip's head.

- Pry off ten rubber paddings on the outer edge of the laptop to reveal the torx screws.
- Unscrew the ten 8mm torx screws that are under the rubber paddings using the T7 tip torx screwdriver.

- Remove the two 4mm screws indicated by the M2.5X4 using the J00 tip screwdriver.
- Remove SD card cap by just sliding out to reveal one screw.

- Remove the two 3mm screws indicated by the M2.03 using the J00 tip screwdriver.
- Remove the 4mm SD card screw using the J00 tip.

- Remove the one 4mm fan screw using the J00 tip screwdriver.
- Remove screw and metal plate to expose ribbon cable connector.

Step 10

 Use an opening tool to pry up the ribbon connector to disconnect.

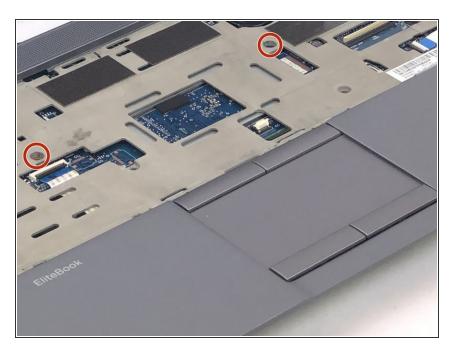

- Turn laptop over back to normal position as shown in the image.
- Use opening tools to pry up keyboard.
- When prying up keyboard, be sure to start near any corner of the keyboard.
- There are two ribbon cables that must be disconnected before fully removing keyboard.

- Carefully lift keyboard on one side to expose the two ribbon cables.
- Use an opening tool to lift up the locking clip and unplug the two ribbon cables.

 Remove the two 4mm screws centered notated by the keyboard logo using the J00 tip.

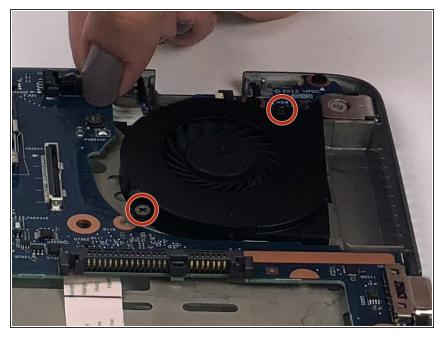

- Once keyboard has been fully removed, the system case containing the motherboard can be lifted out easily.
- The display is connected to the shell of the laptop.

 Unplug fan cable by pulling away from its connector.

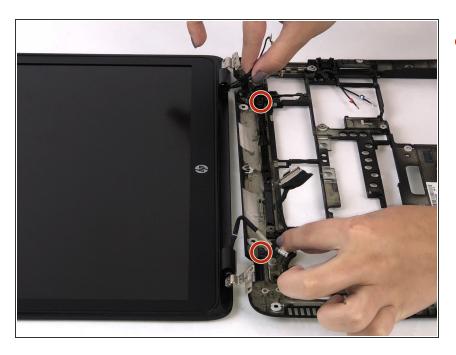

- Unscrew the two 6mm fan screws using the J00 tip.
- (i) Fan screws are encased in springs and cannot be removed.

Step 17 — Monitor display

 Retrieve the monitor display connected to the plastic chassis.

Step 18

 Unscrew the two 4mm hinge screws using the Philips 00 tip screwdriver.

 Unhinge the monitor display from the chassis.

To reassemble your device, follow these instructions in reverse order.
