

Lenovo Thinkpad X201 Trackpad Replacement

If the Trackpad on your Lenovo Thinkpad X201...

Written By: Peter Gachuki

INTRODUCTION

If the Trackpad on your Lenovo Thinkpad X201 laptop is unresponsive, broken, or faulty, follow this guide to replace it.

A trackpad, or touchpad, is a pointing device similar to a computer mouse, featuring a tactile sensor. A tactile sensor is a specialized surface that can translate the motion and position of a user's fingers to a relative position on the operating system that is then displayed on the screen.

Happy Fixing!

Warning:

Before beginning the trackpad repair, make sure to power off your laptop and disconnect it from outside power sources, such as a wall socket.

TOOLS:

Spudger (spatule antistatique) (1)

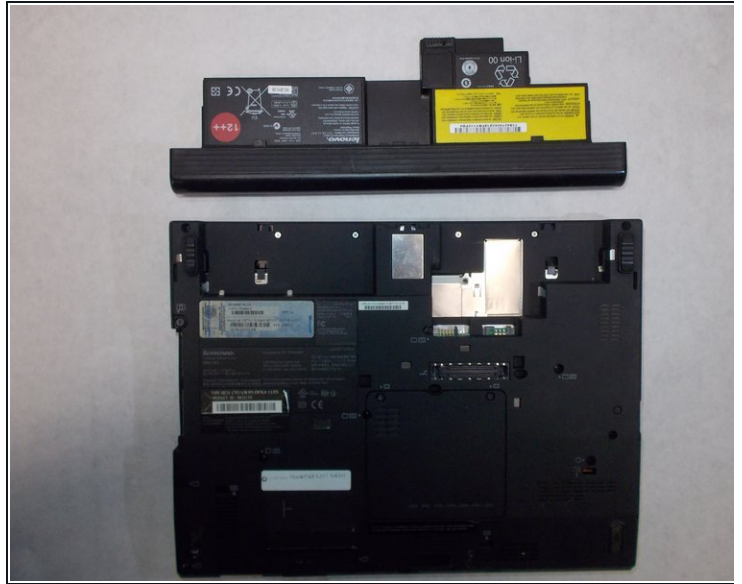

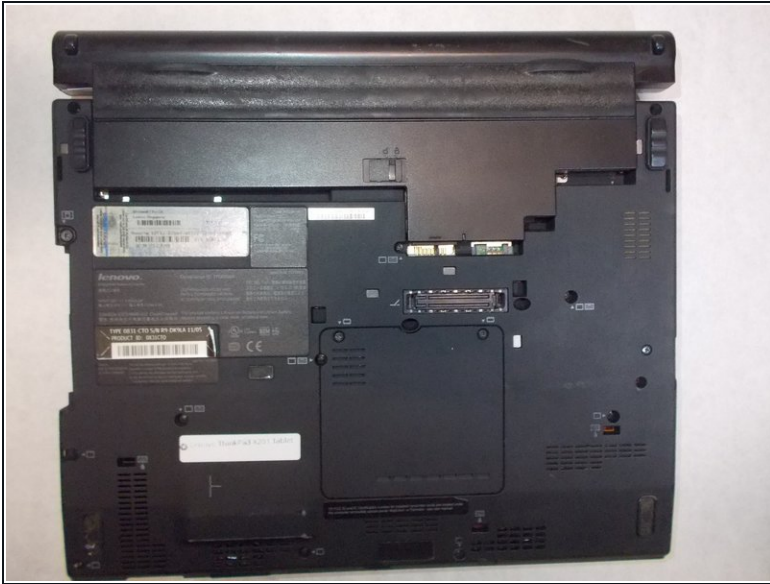

Tournevis cruciforme #00 (1)

Step 1 — Trackpad

- Flip the laptop so that the rear side is visible.
- Slide the switch located near the top of the laptop.

Step 2

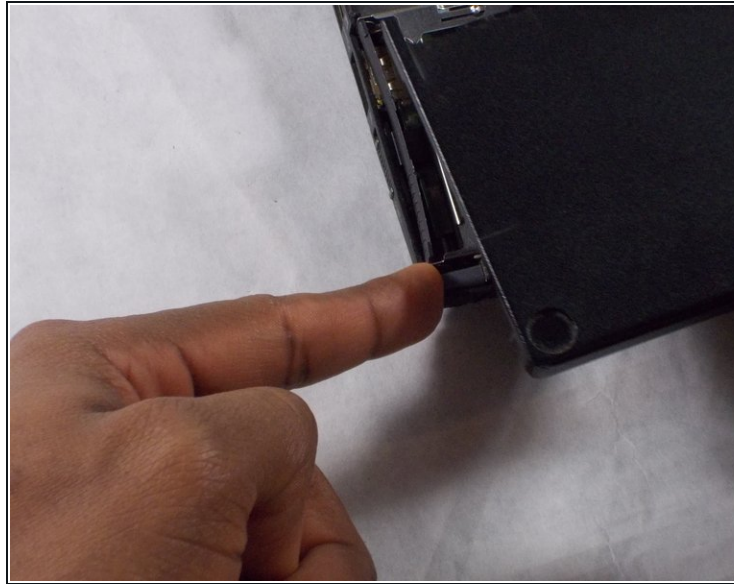

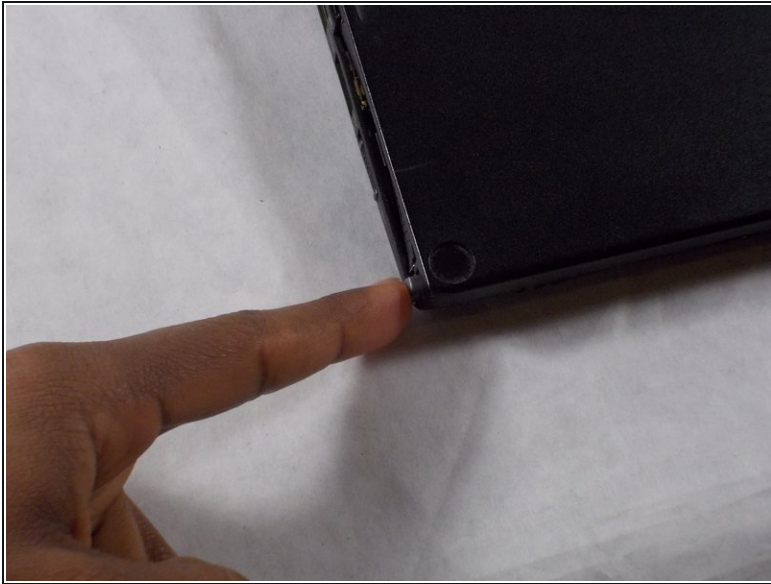

- Slide out the battery near the top of the laptop.

Step 3

- Remove all screws found on the rear side of the laptop using a Phillips #00 screwdriver.

Step 4

- Push the silver bar on the side of the laptop downwards.

 The trackpad will pop up.

Step 5

- **If step 4 does not work**, gently push the bar down while using your other hand to pull the trackpad up.

Step 6

- Remove the trackpad from the laptop.

To reassemble your device, follow these instructions in reverse order.
