Step 4 — Removing The Speakers

 Be careful to not tare any of the ribbon cables.

Step 7 — Removing Other Components

- You can then remove the components such as the cameras and the mic.
 - To remove the headphone jack you un-screw the metal bracket.
- i** The MIC and the AUX port are held in by adhesive but giving it a bit of a push should set them both free.

To reassemble your device, follow these instructions in reverse order.
