Check for OBD2 codes, ABS, DTC without a scanner

How to display any OBD2 or ABS codes or errors without using a scan tool

Written By: ndsol

Step 1 — Check for OBD2 codes, ABS, DTC without a scanner

- Turn ignition two clicks to the ON position

- Insert a bent paperclip into the SCC connector. (See video for where the SCC connector is located)

- Touch both of the exposed pins to short the connection. Continue to short the connection for more than 5 seconds.

- Any codes will display on the Odometer/Trip display, or "NO" if there are no stored codes

- Remove paperclip and wait 10 seconds

- Turn ignition OFF and remove key
