

Protocol TerraCopter EVO Controller Motherboard Replacement

This guide shows the motherboard replacement for the Protocol TerraCopter EVO drone.

Written By: Jonathan Earls

INTRODUCTION

The Terracopter EVO controller motherboard is used to control all of the functions of the controller and relay them to the drone.

TOOLS:

- [Phillips #0 Screwdriver](#) (1)
 - [Spudger](#) (1)
 - [Soldering Iron](#) (1)
-

Step 1 — Controller's battery

- Using a Phillips #0 screwdriver, remove the screw connecting the battery cover to the controller.
- Remove the battery cover from the controller.

Step 2

- Remove all of four of the AA batteries from the controller.

Step 3 — Protocol TerraCopter EVO Controller Opening

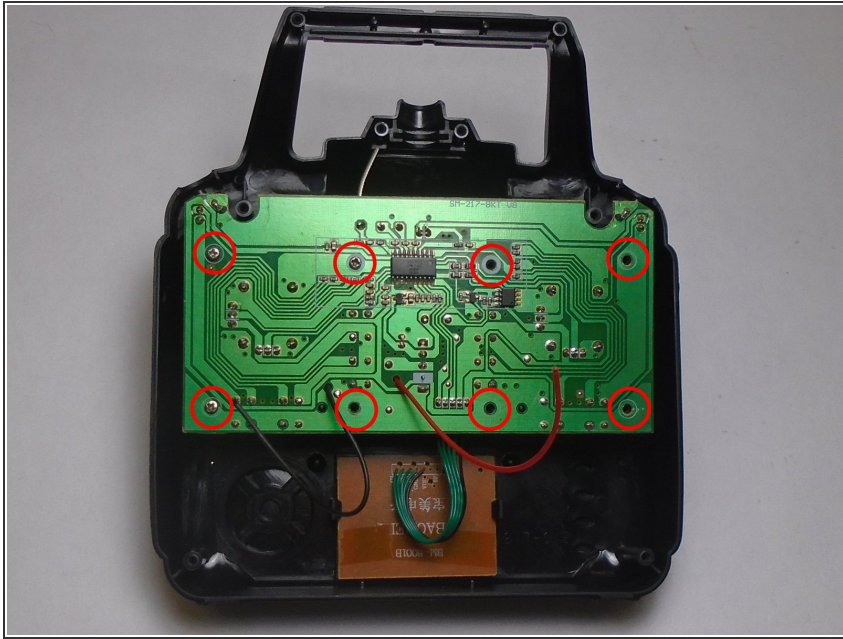

- **Note:** the four Phillips screws on the rear panel are a millimeter longer than the two screws near the antenna and the two screws on the handle.
- Orientate the controller to where the battery compartment is facing upwards.
- Remove the four 5mm and four 4mm Phillips #1 screws from the case.

Step 4

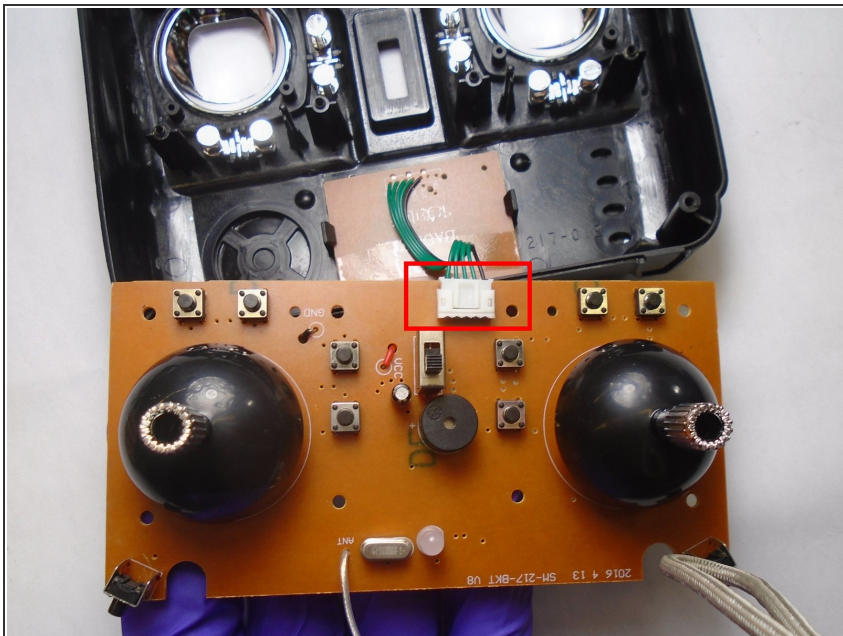

- Since the battery wires are still attached, carefully move the rear panel down to expose the motherboard.

Step 5 — Controller Motherboard

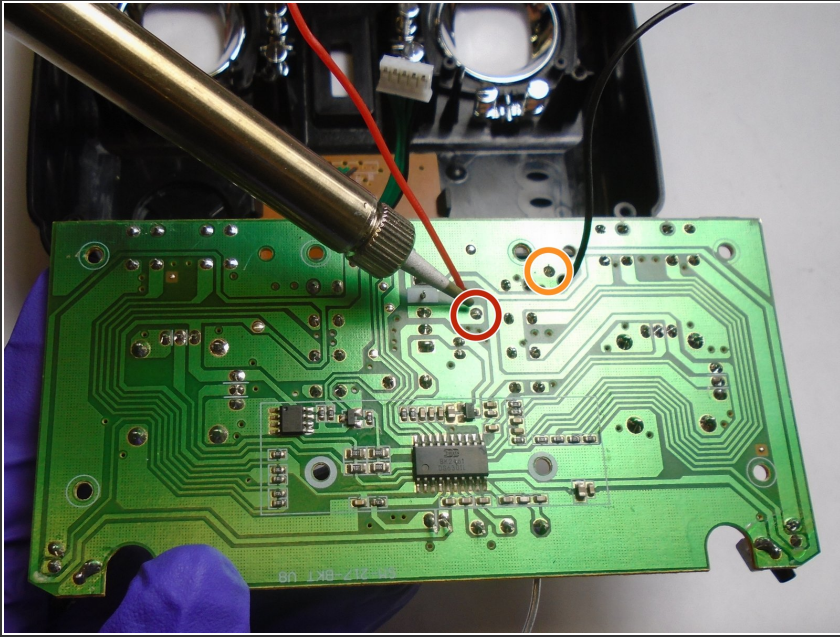

- Remove the eight 5mm Phillips #1 screws from the motherboard.

Step 6

- Locate the set of four green wires and one black wire attached to the motherboard.
- Remove the male, white connector by pressing up on the two tabs on the female connector. Then, pull the connector away from the female connector on the motherboard

Step 7

- Locate the single pin holding the negative and positive wires to the motherboard. Each lead should have one pin holding each wire to the green side of the motherboard.
- Using a soldering iron, melt the existing solder point for the red lead (positive line).
- Using a soldering iron, melt the existing solder point for the black lead (negative line).
- Pull the red and black leads through their respective holes, out of the motherboard.
- ① Check out our [How to Solder and Desolder Connections guide](#) if you are unfamiliar with soldering practices.

To reassemble your device, follow these instructions in reverse order.
