Step 1 — Keyboard Panel

- Remove the ten 18 mm screws holding down the outer shell of the laptop using the Phillips #000 screwdriver.

Step 2

- Use your fingers to gently pry open the gap between the silver and black parts of the casing.

- Separate the keyboard panel from the body of the laptop by wedging the iFixit Opening Tool in between the keyboard panel and the body.

- ⓘ The teeth of the casing should make a clicking noise as they're pulled apart.

Step 3

- Gently open the casing until the white, silver, and gold power strips are visible. Gently peel the strips from the bottom side of the laptop.

- Disconnect the two cables connecting the keyboard panel to the laptop.

Step 4

- Remove the keyboard panel from the laptop.

Step 5 — Battery

- Use the Phillips #000 screwdriver to remove the eight 4 mm screws holding the battery in place.

Step 6

- Carefully remove the battery from the device.

To reassemble your device, follow these instructions in reverse order.
