Step 1 — Rubber Feet Removal

- Use a prying tool to pry the 2 rubber feet off closest to the hinge of the device

- Repeat this process for the other side of the device

- The bottom rubber feet do not have hidden screws underneath them, and as such, they are unnecessary to remove

Step 2 — Screw removal

- Remove the 11x 5mm Phillips PH-0 screws (circled)

Step 3 — Keyboard Unclipping

- Use your finger to pry the outer blue shell over the keyboard

- Continue this process around the edges of the device

- You may have to use a prying tool to pry the harder edges such as around the I/O ports

- <u>Do not</u> lift the keyboard once all the clips are undone, as there are still various cables connected
Step 4 — Keyboard removal

- Disconnect the power button connector by peeling back the protective tape, using your fingernail to flip the white retaining clip back, and pulling the ribbon cable out

- Disconnect the touchpad connector by using your fingernail to flip the black retaining clip back, and pulling the ribbon cable out

- Disconnect the keyboard connector by using your fingernail to flip the black retaining clip back, and pulling the ribbon cable out

- Your keyboard assembly is now safe to remove
Step 5 — Connector removal

- Remove the power button connector from the power button by flipping the white tab up and pulling the ribbon cable out

Step 6 — Unscrew Button

- Unscrew the two Philips PH0 2.5mm screws

Step 7

- Lift the power button out of the slot

To reassemble your device, follow these instructions in reverse order.
