

# Sliding Glass Door Rollers Replacement

This guide will help people who may be trying...

Written By: Britni Coder

# INTRODUCTION

This guide will help people who may be trying to replace their sliding glass door rollers. You will need a screw driver and a set of new door rollers to perform this task. It is also handy to have someone there to help you get the doors off the track.

---

## TOOLS:

Phillips #3 Screwdriver (1)

---

### Step 1 — Door Rollers

- Find the screw on the bottom of the door. Adjust the rollers to the highest setting to lift the rollers off track.
- ① The adjustment screw is normally at the bottom.

## Step 2

- Lift the door off the track by grabbing both sides of the door and shimmy it out until it is loose.
- ① This step may require two people.

## Step 3

- Place the doors on a steady table or surface. On the bottom of the doors near where the rollers are, there are two screws. Remove the top one with the Phillips #3 screwdriver to release the rollers.

## Step 4

- Now that the rollers are loose, slide them off of the door.

## Step 5

- Install the new door rollers by sliding them into place where the old ones were removed.

## Step 6

- Using the Phillips #3, adjust the new rollers so they are at their highest point inside the door frame to easily put door back on tracks.

## Step 7

- Put the doors back on the tracks by first sliding the top part of the doors into place. After that slide in the lower part of the door.
- ☑ Make sure your doors are on the track or they will not move properly.

## Step 8

- Finally, readjust the rollers to the proper height where the doors roll smoothly. You may have to guess and check until the doors operate smoothly. To do this use a Phillips #3 screwdriver to tighten and loosen the screw until the desired height is found.

---

Sliding glass door rollers go through wear and tear, which can make the doors difficult to use. After completing this guide your doors should be rocking and rolling like new!
