Huawei Mate 10 lite battery replacement

Replacing the battery of a Huawei Mate 10 lite

Written By: Maximilian Deisz

INTRODUCTION

This guide shows you how to replace the lithium-ion-battery of your Mate 10 lite.

You have to take appropriate security measures if the battery is swollen. For your own security you should drain the battery to 25% as that reduces the risk of fire if you damage the battery during repair.

The backcover is not glued so it can be opened easily.

🔧 TOOLS:

- iFixit Opening Picks (Set of 6) (1)
- iFixit Opening Tool (1)
- Phillips #00 Screwdriver (1)
- T2 Torx Screwdriver (1)
- Spudger (1)
- Plastic Cards (1)
- iFixit Adhesive Remover (for Battery, Screen, and Glass Adhesive) (1)

Empfohlen aber nicht benötigt

⚙ PARTS:

- New Item (1)

Step 1 — Remove SIM card

● Remove the SIM card by using a paperclip or a special tool and inserting it into the hole next to the SIM card tray until it pops out.
Step 2 — Open the case

- Remove the Torx T2 screws on the bottom of the case(next to the USB port)

- Use the Opening tool on the bottom of the case and pry it open

- go around the side to open the phone

- place the device screen down and take the backcover off to the left side

Step 3 — Remove the cables

- Red: Phillips #00 screws

- Blue: Remove the cable clamps with the Spudger

- Remove the cables connecting to the backside and remove the cables that run over the battery

Step 4 — Remove the battery

- Insert the plastic card into the side and push them under the battery

- the glue under the battery can be removed with highgrade IPA or a special glue remover. Otherwise you can pry the battery out with the spudger, the plastic cards and the opening picks
