INTRODUCTION

The brush replacement consists of two brushes: the rubber brush and the wire brush. These brushes can get tangled with hair and dirt easily, so it is important to replace them every now and then.
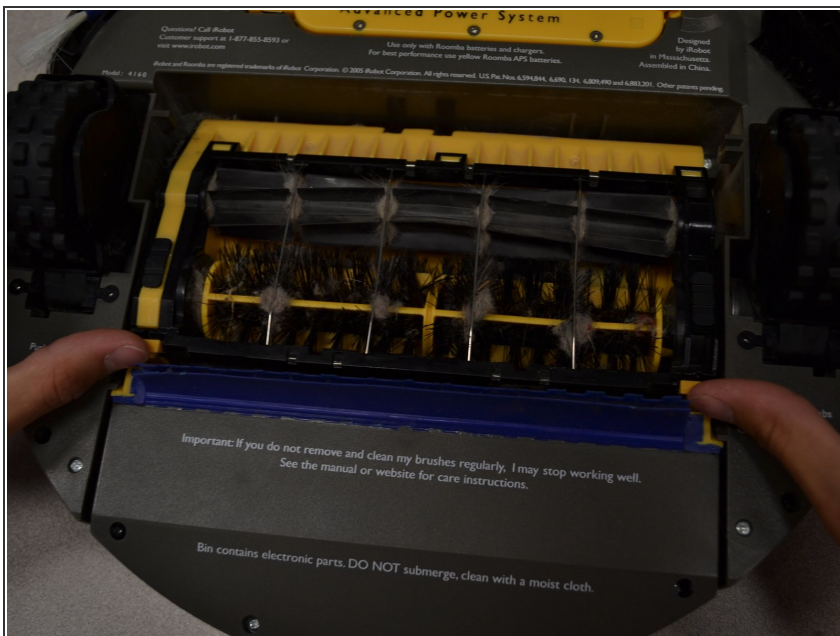

Step 1 — Brush Guard

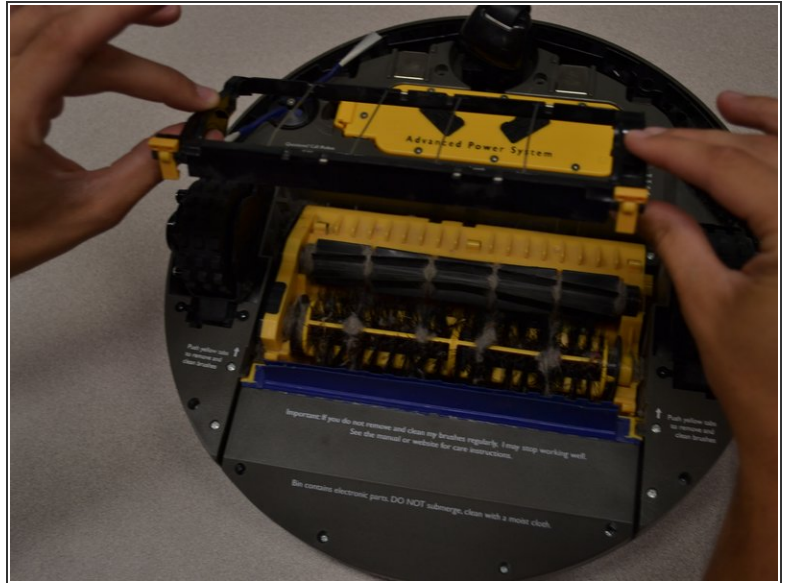

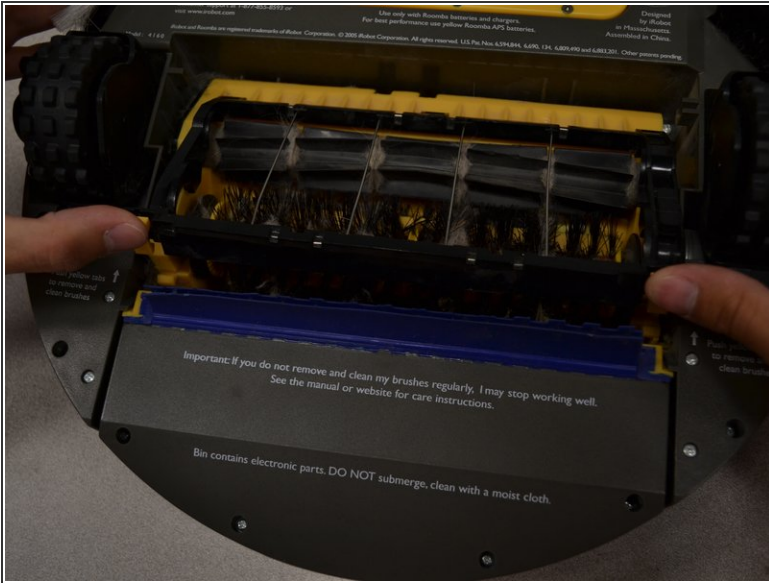

⚠ Make sure the Roomba is turned off to prevent injury.

● Turn the Roomba upside down so that the underside is exposed. The wheels and brushes should be visible.

● Identify the brush guard, which is the black rectangular frame that the metal rods are attached to.
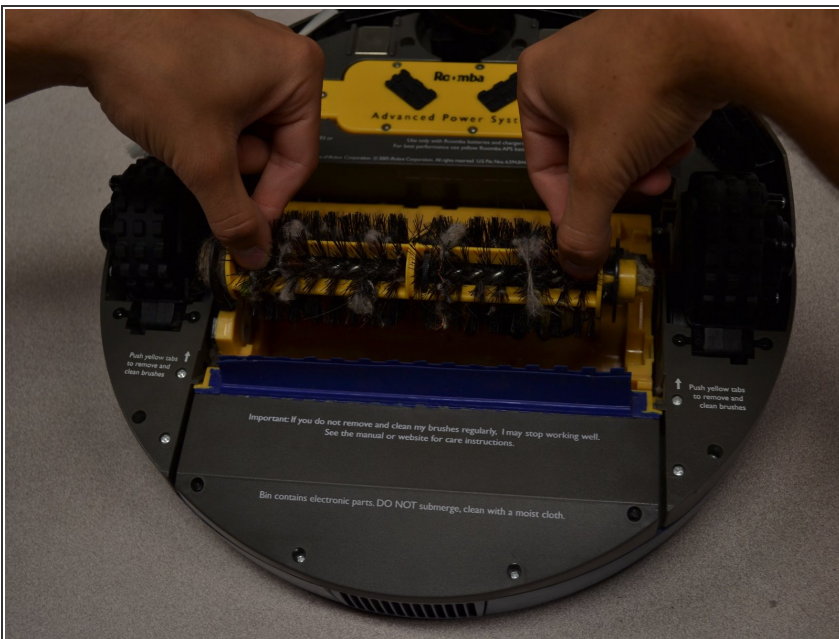

Step 2

● Locate the 2 small rectangular yellow tabs on either side of the brush guard, directly adjacent to the blue flap.

● Place index fingers on both tabs, and apply slight pressure in the direction of the yellow battery pack.

ⓘ While you are applying pressure, the guard should hinge up in the direction of the yellow battery pack.

Step 3

- After the guard hinges up, lift the guard up and away from the Roomba.

Step 4 — Brush

- Remove the wire brush by grabbing it by the yellow plastic part of the brush.

- Pull the brush upwards until it comes out.

This document was generated on 2020-11-28 03:16:18 AM (MST).

Step 5

- Remove the rubber spinning brush by grabbing it by the rubber part on both ends.

- Pull the brush upwards until it dislodges.

To reassemble your device, follow these instructions in reverse order.
