---

## INTRODUCTION

Capturing images is how people retain visible proof of memories being created. This guides purpose is to help the user replace a major key component in a cellular device.

---

### TOOLS:

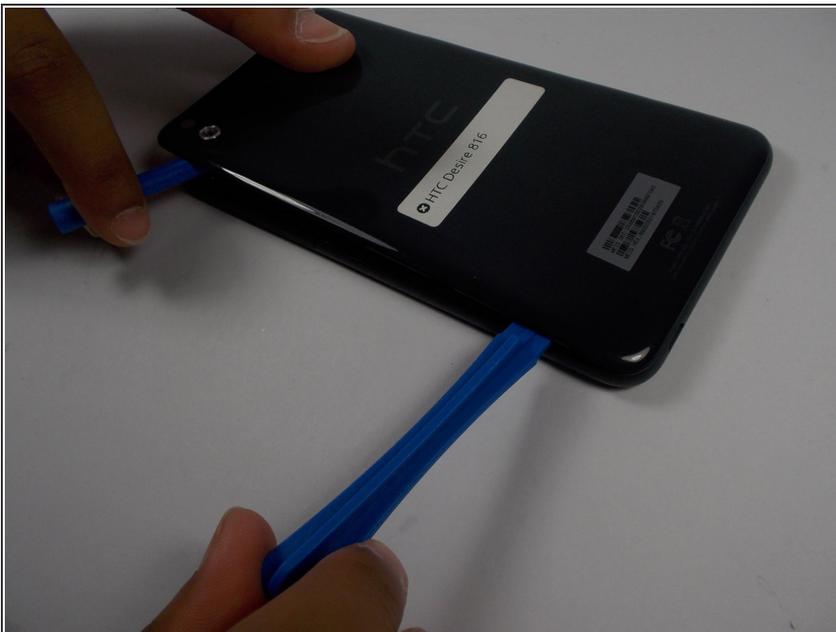

- [iFixit Opening Tools](#) (1)
  - [Spudger](#) (1)
  - [T5 Torx Screwdriver](#) (1)
  - [Phillips #000 Screwdriver](#) (1)
  - [Tweezers](#) (1)
-

## Step 1 — Battery

- Pry open the back panel by inserting the plastic opening tool on the left of the camera. We find this spot the easiest to get the tool under the panel.

## Step 2

- Once you get an open spot, with a second plastic opening tool, slide down to the bottom of the phone to free the rest of side.

### Step 3

- There is adhesive between the battery and the back panel. Take a nylon spudger to cut through the adhesive.

**⚠** Be sure to use the correct tool for the job. Metal spudgers can puncture an unprotected battery, potentially causing a fire.

### Step 4

- Once all way around the bottom, the panel should be broken free of the adhesive, and the rest of the panel should pop right off.

## Step 5

- Insert a nylon spudger at the bottom of the battery and lift up to remove the battery.

**⚠** Be sure to use the correct tool for the job. Metal spudgers can puncture an unprotected battery, potentially causing a fire.

## Step 6

- There is adhesive on the other side of the battery as well, take the nylon spudger used to get off the panel and cut through.

## Step 7

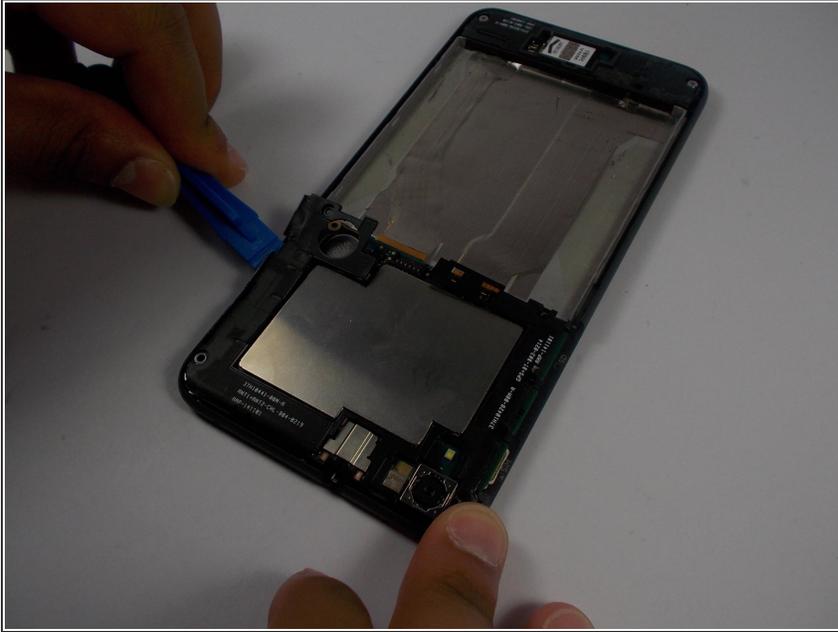

- Carefully lift battery backside first to disconnect the white connector.

## Step 8 — Back Facing Camera

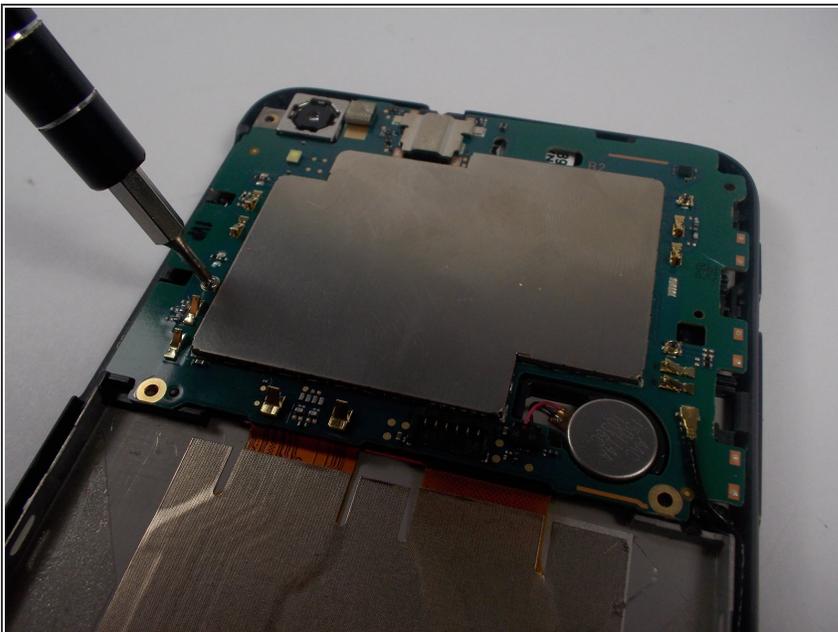

- Take the T5 screwdriver head to take out these 4 screws

## Step 9

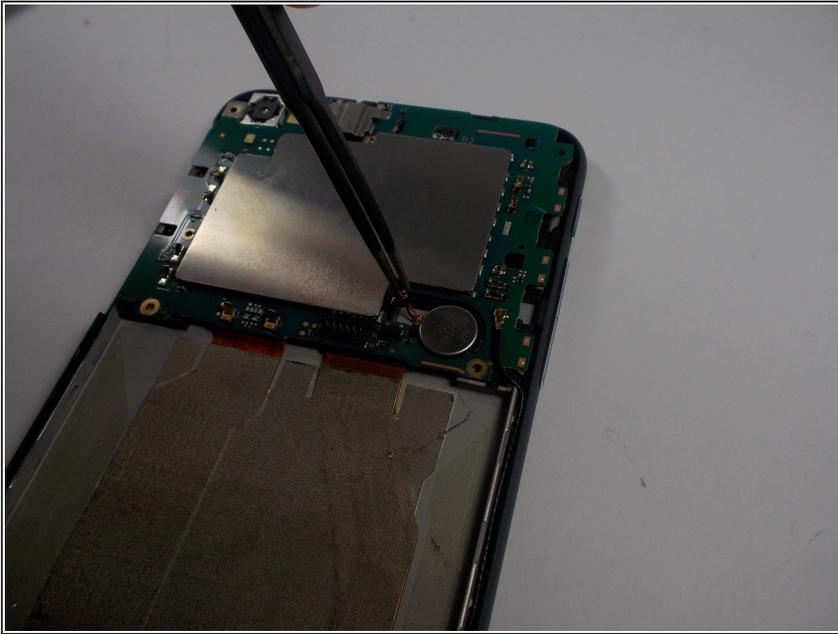

- Remove the black plastic casing with a plastic opening tool.

## Step 10

- Take the PH000 screwdriver head to take out the one screw that's holding down the green panel. (The screw is located on the left side of the panel)

## Step 11

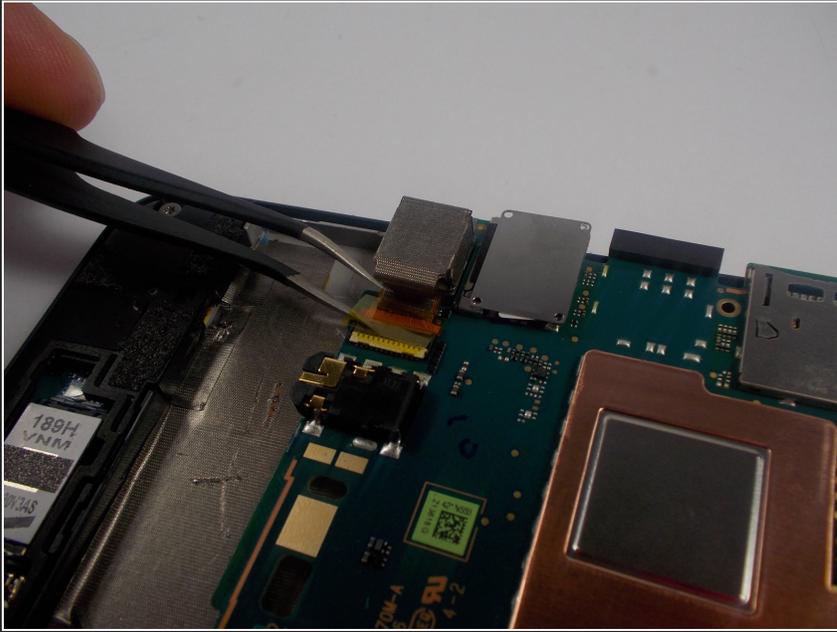

- With your pair of tweezers carefully unplug the black and red wire in order to remove the motherboard

## Step 12

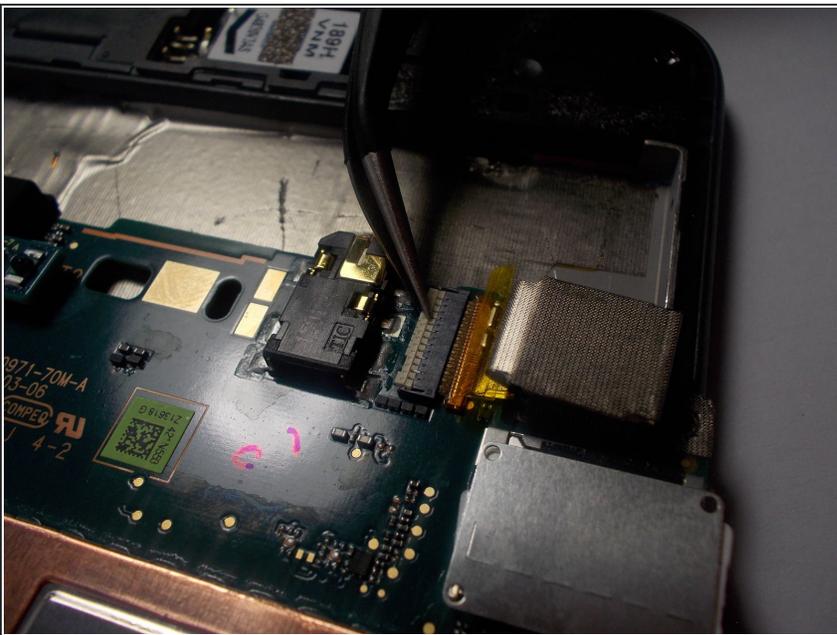

- Once you have removed the wire, you can carefully lift up the motherboard

## Step 13

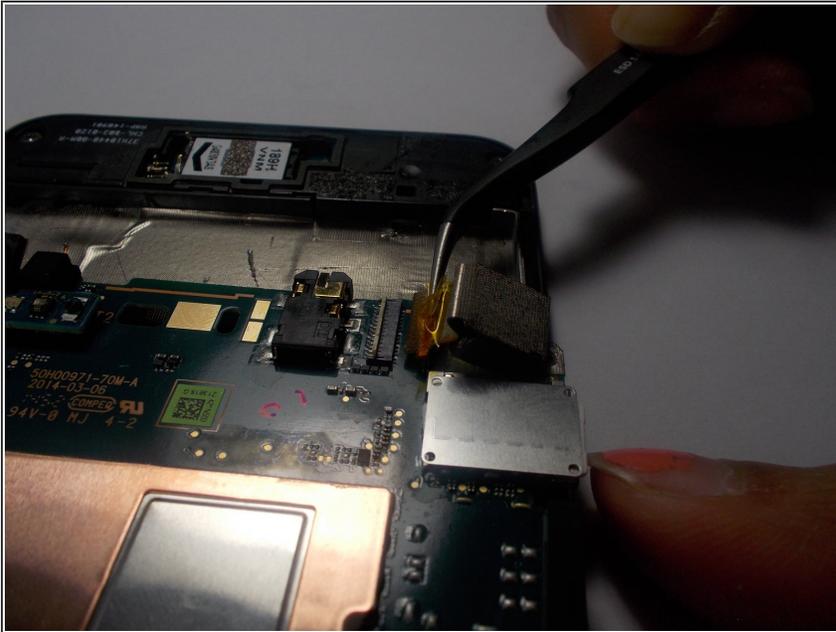

- Peel off the yellow film that's attaching the camera to the motherboard

## Step 14

- Slowly lift up the white connector so that the camera's cable may properly be detached.

## Step 15

- Carefully peel off the adhesive so that the camera can be disconnected from the mother board

To reassemble your device, follow these instructions in reverse order.
