

# Michael Kors Watch Link Band Replacement

Adding links to the band of a Michael Kors wrist watch, or removing extra or broken links from a Michael Kors watchband.

Written By: Jack Beinkampen

---

## INTRODUCTION

Almost every watchmaker from Casio to Rolex produces watches with link bands. When adjusting or repairing a band becomes necessary, adding and removing links with a few special tools is the only solution. This comprehensive guide will demonstrate how to properly perform such manipulations on a Michael Kors brand wristwatch.

---

### TOOLS:

- [Pin Punch](#) (1)

For watch pins

- [Watch Hammer](#) (1)

*Has a head with a soft side and a metal side*

- [Watch band block holder](#) (1)

*Usually made of delrin. Safely holds a watch and its band in place while hammering pins in or out.*

---

## Step 1 — Link Band

- Place the watch on your wrist and determine whether links should be added or removed.
- If watchband needs to be expanded, approximate the number of links required.

## Step 2

- Set the watch on the block holder.
- Ensure the arrows located on the links are pointing downward.

### Step 3

- When removing damaged or extra links, hold one end of the pin pusher against the pin to be removed.
- Strike the other end of the pin pusher with the metal side of the watch hammer until the pin slides out.
- ⓘ Two pins hold each link to the band, so two pins must be removed per link.

### Step 4

- Discard the broken links or save any extra links that you remove.

## Step 5

- To add links to the watchband, position the watch on the block holder with the arrows facing upward.
- Insert pins into the holes that connect the new link to the rest of the watchband.
- Use the soft side of the hammer to strike the pin down.

## Step 6

- Lastly, make sure that all the pins joining the links are secured in place.

To reassemble your device, follow these instructions in reverse order.
