Step 1 — Back Cover

- Flip the laptop over to the back.

- Slide the right latch to unlock, then simultaneously slide the left latch outward while pulling the battery out.
Step 2

- Unscrew all twelve 3mm Phillips screws with the J1 screwdriver.

- Unscrew two 3mm Phillips screws on the black panel using the PH0 screwdriver.

- Lift the black panel upward by inserting your fingernail in the space provided.

Step 6

- Insert and gently twist the flat metal spudger between the keyboard assembly and the bottom plastic cover so that a small seam is opened.

- Put in the metal spudger in the seam to hold its place while twisting and levering the flat metal spudger along the whole keyboard.

⚠ Be careful not to hit any of the internals with the metal spudger. The regular black nylon spudger should be used whenever possible, especially around batteries or sensitive internal components.

ⓘ You will need add a lot of pressure to open the laptop. Expect to hear snaps as the clips holding the two pieces are released.

- Slowly pry off the back

Step 7 — Keyboard

- Unlatch the clip attaching the white flattened flexible cord with a blue tip to the circuit board with your thumb.

- Pull out the white flattened cord.

Step 8

- Pull back yellow tape attaching the metal colored flexible flattened cord to the circuit board.

- Lift up the latch at the end of the cord.

- Pull out the cord to release the keyboard.
