INTRODUCTION

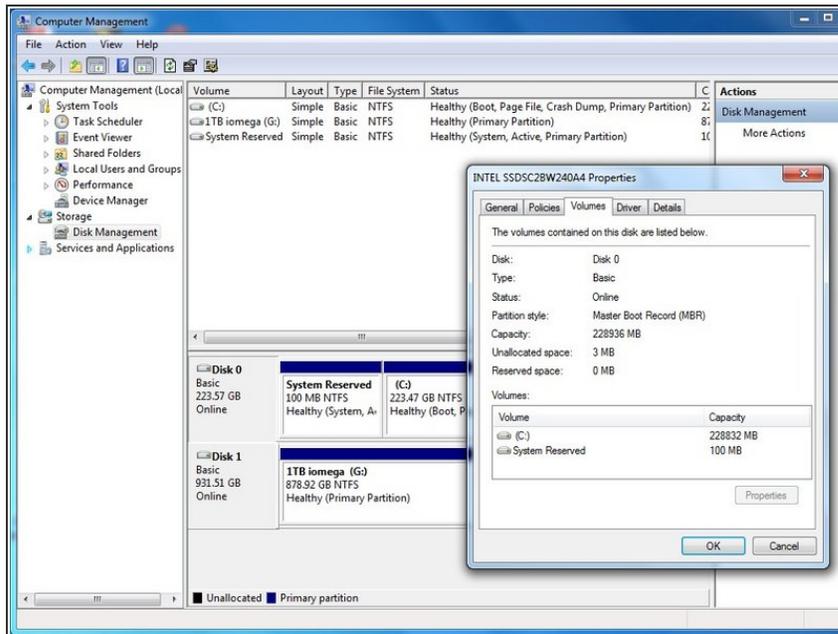

When software goes wrong or refuses to do what you want, many people are at a loss. Here are some guides to take you through s few of the more important topics.

Step 1 — Software First aid

- Here are some of the resources we've collected to deal with software problems.
- How to deal with a [slow laptop](#). Perhaps the commonest single problem we deal with at Restart Parties.
- Just a few [Windows miscellaneous tips](#).
- [Apple miscellaneous tips](#) for users of OS X and Macs.
- [USB bootable tools](#) - when the operating system won't boot or is riddled with badness, this is where to turn.
- (Continued in the next step...)

Step 2 — Once the patient is out of danger...

- And to gently expand your mind a little:
 - [Be your own security expert](#) - a very important topic - how to stay safe ourselves and help others stay safe too.
 - [Disk wipe utilities](#) - how to put your private data beyond recovery when you dispose of a computer.
 - [Linux migration](#) - how to throw windows out of computers. Whether you're fed up with Windows or want to give an old laptop a new lease of life, Linux is an excellent option, and needn't be in the least frightening.
 - BIOS is so yesterday! Find out about [UEFI and GPT](#) without blowing your mind.

Remember, you always need one more reboot than you thought you did.
